RHX | 6" - 8"

POMPA SOMMERSA RADIALE INOX
STAINLESS STEEL RADIAL SUBMERSIBLE PUMP

Elevato rendimento
High efficiency

Risparmio energetico
Energy savings

Pressioni elevate
High pressures

Ellettropompe sommerse radiali 6"/8" - Serie 140/180 RHX

Le pompe radiali della gamma RHX, sono completamente in acciaio inossidabile microfuso AISI 304 e rappresentano la soluzione più evoluta e performante della gamma radiale. La soluzione radiale avendo un ingombro assiale particolarmente ridotto permette l'impiego di un elevato numero di stadi, con la conseguenza di ottenere a parità di diametro prevalenze molto elevate. Il diffusore, grazie al sistema di palettatura prolungata fino all'uscita della girante, consente all'acqua di seguire una traiettoria obbligata con conseguente aumento delle prestazioni e del rendimento idraulico. Lo stadio è composto da: girante, diffusore, cono e ghiera, bronzina intermedia, anello di usura, o-ring. In questo tipo di pompa le giranti sono fissate all'albero pompa tramite il cono e la ghiera, evitando quindi il taglio chiavetta e il relativo indebolimento dell'albero. Il corpo diffusore è bloccato l'uno con l'altro, tramite n° 8 Viti prigioniere.

Materiali

Diffusore, gabbia di aspirazione, corpo valvola e giranti in acciaio inox microfuso EN 1.4301 (AISI 304) Albero pompa in acciaio inox EN 1.4301 (AISI 304) - Bronzine, anelli di usura, guarnizione valvola in gomma NBR.

Su richiesta possibilità di fornire idraulica in AISI 316 e DUPLEX 1.4462

Campi di prestazioni idrauliche

- Portate Fino a 50 m³/h (Versione 6")
- Portate fino a 80 m³/h (Versione 8")
- Potenze fino a 37 Kw (Versione 6")
- Potenze fino a 92 Kw (Versione 8")
- Prevalenze fino a 682 m

**Radial submersible pumps 6"/8" - Series 140/180 RHX**

The radial pumps in the RHX range are made entirely of microcast AISI 304 stainless steel and represent the most advanced and high-performance solution in the radial range. The radial solution, which has a very small footprint in the axial direction, allows the use of a high number of stages, with the consequence of obtaining very high heads with the same diameter. The diffuser, thanks to the extended blade system up to the outlet of the impeller, allows the water to follow a compulsory trajectory with a consequent increase in performance and hydraulic efficiency. The stage consists of: impeller, diffuser, cone and ring nut, intermediate bush, wear ring, o-ring. In this type of pump, the impellers are fixed to the pump shaft by the cone and ring nut, thus avoiding key cutting and the associated weakening of the shaft. The diffuser body is locked to each other by n° 8 captive screws.

Materials

Diffuser, suction cage, valve body and impellers in micro-cast stainless steel EN 1.4301 (AISI 304) - Pump shaft in stainless steel EN 1.4301 (AISI 304) - Bushings, wear rings, valve gasket in NBR rubber.

On request, hydraulics in AISI 316 and DUPLEX 1.4462 can be supplied

Performance fields

- Flow rates Up to 50 m³/h (6" version)
- Flow rates up to 80 m³/h (8" version)
- Powers up to 37 kW (6" version)
- Powers up to 92 Kw (8" version)
- Head up to 682 m

**Pompes immergées radiales 6"/8" - Série 140/180 RHX**

Les pompes radiales de la gamme RHX sont entièrement fabriquées en acier inoxydable AISI 304 microfondu et représentent la solution la plus avancée et la plus performante de la gamme radiale. La solution radiale, avec un encombrement axial particulièrement réduit, permet l'utilisation d'un grand nombre d'étages, avec pour conséquence l'obtention de hauteurs d'élévation très élevées avec le même diamètre. Le diffuseur, grâce au système d'ailettes prolongées jusqu'à la sortie de la roue, permet à l'eau de suivre une trajectoire obligatoire avec une augmentation conséquente des performances et de l'efficacité hydraulique. L'étage se compose de : roue, diffuseur, cône et écrou de bague, douille intermédiaire, bague d'usure, joint torique. Dans ce type de pompe, les roues sont fixées à l'arbre de la pompe par l'écrou à cône et à bague, ce qui évite de couper la clavette et d'affaiblir l'arbre. Le corps du diffuseur est fixé l'un à l'autre par des vis imperdables n° 8.

Matériaux

Diffuseur, cage d'aspiration, corps de vanne et roues en acier inoxydable microfondu EN 1.4301 (AISI 304) - Arbre de pompe en acier inoxydable EN 1.4301 (AISI 304) - Bagues, anneaux d'usure, joint de vanne en caoutchouc NBR.

Sur demande, des hydrauliques en AISI 316 et DUPLEX 1.4462 peuvent être fournies.

Champs de performance

- Débit jusqu'à 50 m³/h (version 6")
- Débit jusqu'à 80 m³/h (version 8")
- Puissances jusqu'à 37 Kw (version 6")
- Puissance jusqu'à 92 Kw (version 8")
- Hauteur de chute jusqu'à 682 m

**Bombas sumergibles radiales 6"/8" - Serie 140/180 RHX**

Las bombas radiales de la gama RHX están fabricadas íntegramente en acero inoxidable AISI 304 microfundido y representan la solución más avanzada y de mayor rendimiento de la gama radial. La solución radial, al tener una huella axial particularmente reducida, permite utilizar un elevado número de etapas, con la consecuencia de obtener alturas de elevación muy elevadas con el mismo diámetro. El difusor, gracias al sistema de álabes prolongados hasta la salida del rodete, permite que el agua siga una trayectoria forzada con el consiguiente aumento del rendimiento y de la eficacia hidráulica. La etapa se compone de: rodete, difusor, cono y tuerca anular, casquillo intermedio, anillo de desgaste, junta tórica. En este tipo de bomba, los impulsores se fijan al eje de la bomba a través del cono y la tuerca anular, evitando así el corte de chaveta y el consiguiente debilitamiento del eje. El cuerpo del difusor se fija entre sí mediante tornillos prisioneros del n° 8.

Materiales

Difusor, jaula de aspiración, cuerpo de la válvula e impulsores en acero inoxidable de fundición de precisión EN 1.4301 (AISI 304) Eje de la bomba en acero inoxidable EN 1.4301 (AISI 304) - Bujes, anillos de desgaste, junta de la válvula en caucho NBR.

Bajo pedido, se pueden suministrar hidráulicos en AISI 316 y DUPLEX 1.4462

Campos de actuación

- Caudales hasta 50 m³/h (Versión 6")
- Caudales hasta 80 m³/h (versión 8")
- Potencias hasta 37 Kw (Versión 6")
- Potencias hasta 92 Kw (versión 8")
- Altura hasta 682 m

DIFFUSORE - DIFFUSER

Grazie allo studio di un nuovo sistema di palettatura della girante che si integra nel diffusore, progettato e testato per raggiungere alti livelli di rendimento idraulico, la RHX riesce a dare un'efficienza elevata e valori di pressione tra i più alti della famiglia delle pompe radiali.

The RHX is able to achieve high efficiency and pressure values, among the highest in the radial pump range, as a result of the study of a new impeller blade system integrated in the diffuser, designed and tested to achieve high hydraulic efficiency.
